Step 1 - In the Repository name field, enter your enrollment number :-

New repository

To exit full screen, move mouse to top of screen or press and hold **Esc**

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner * dev2929 Repository name * Dev2402031830023

Dev2402031830023 is available.

Great repository names are short and memorable. Need inspiration? How about [refactored-octo-tribble](#) ?

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:

☒ Add a README file
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore
.gitignore template: None

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Step 2- Click "Create repository".

Dev2402031830023 is available.

Great repository names are short and memorable. Need inspiration? How about [automatic-sniffle](#) ?

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:

☒ Add a README file
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore
.gitignore template: None

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license
License: None

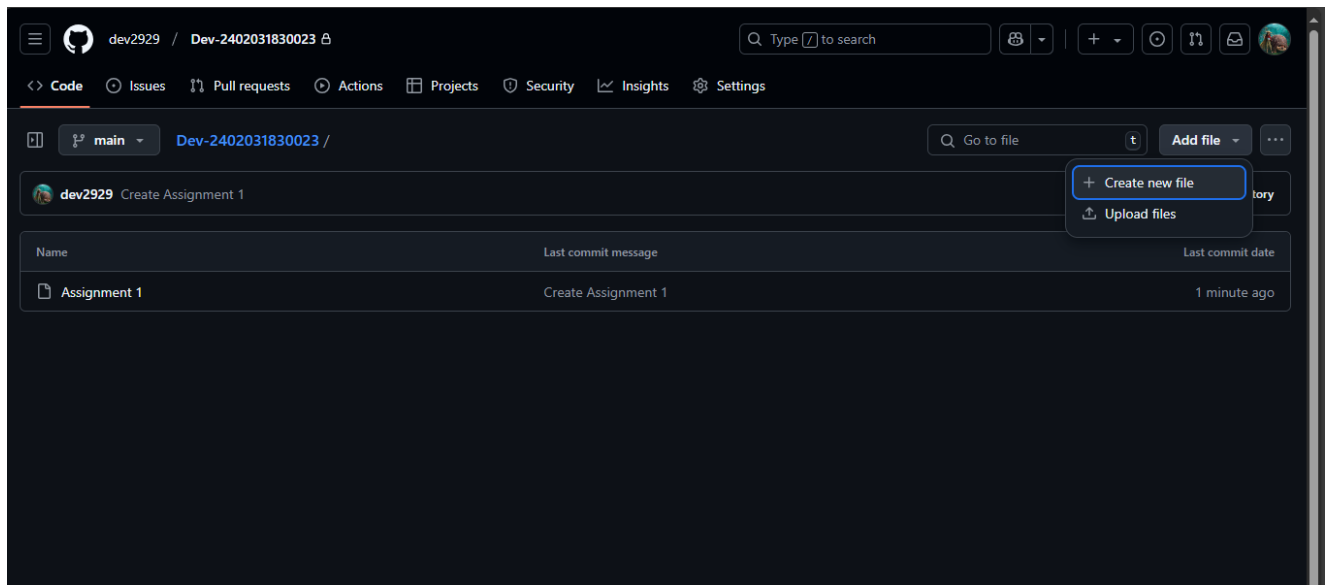

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

This will set **main** as the default branch. Change the default name in your [settings](#).

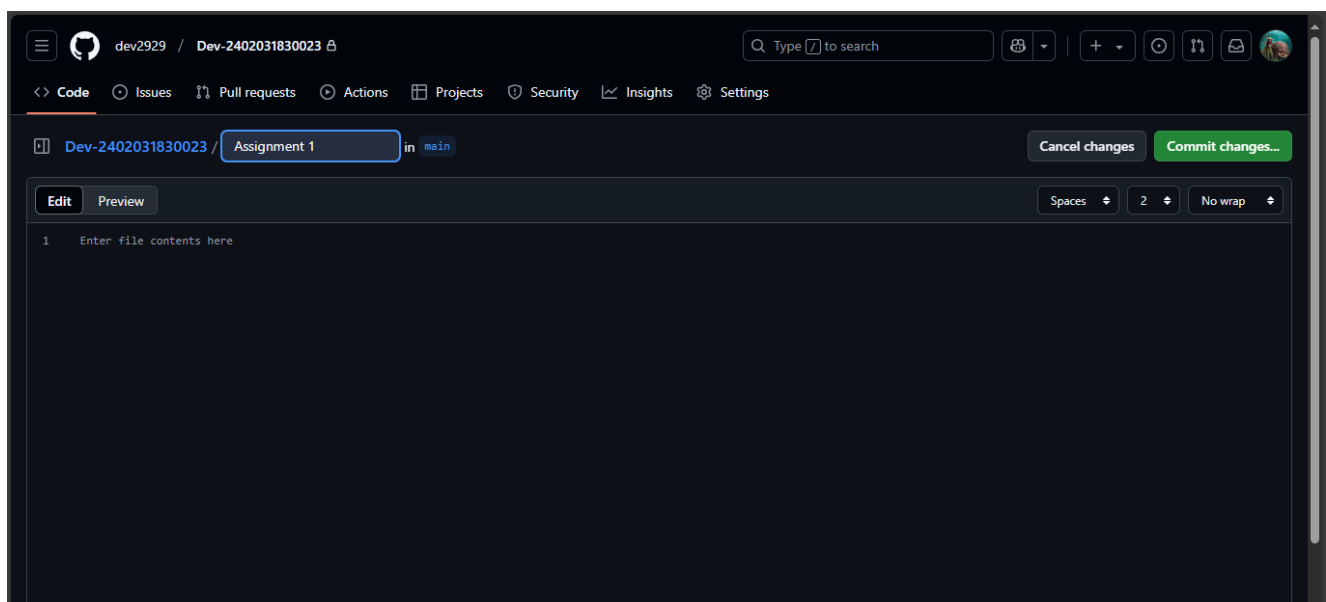

① You are creating a public repository in your personal account.

Create repository

Step 3 - Click the "Add file" dropdown, select "Create new file"

Step 4- Type the folder name followed by a slash (/) to create the folder structure and click on commit changes.

Step 5 – Assignment 1 folder created
